ACCESS Changes

December 21, 1989

Author: *Ken Underwood* **Subsystem:** *Batch Procedures* **User Impact:** *Small*
Panel Changes: *None* **Documents:** *No* **Help File:** *Yes*

The ACCESS batch procedures may now turn klystrons on and off. This function will be primarily used in the Damping Rings and Positron Vault areas. The new verb for klystron functions is MODU with the modifiers /RESET, /OFF, and /ON. For example:

MODU/OFF/PRIM=KLYS/MICR=LI20/UNIT=(21,31) .

In addition, reversible LarGe Power Supplies (LGPS) may be set to Normal or Reverse polarity. The new verbs for these functions are LGNM and LGRV. For example:

LGNM/PRIM=LGPS/MICR=CA01/UNIT=23 .

Changes to Magnet Calibration Diagnostics

January 3, 1990

Author: *Nan Phinney* **Subsystem:** *Magnets* **User Impact:** *Small*
Panel Changes: *Few* **Documents:** *No* **Help File:** *Yes*

A new button has been added to the Magnet Diagnostic Calibration panel to allow the user to select which step of the calibration is to be displayed. This is only used with the Sample Mode of Calibration. Formerly, the user had to enter the desired step each time the display button was pushed. The new function TOGGLE DISPLY STEP toggles through the available steps.

In addition, a check has been added to the HSTA Calibration Disabled bit to prevent the user from attempting to calibrate such devices (Cater 11646). The panel has also been rearranged and text has been added to guide the user.
