Chapter 16: Spills

Quick Start Summary

Who needs to know about these requirements

The requirements of Spills apply to workers, supervisors, the Waste Management Group and Environmental Protection and Radiation Protection departments, the Facilities and Operations Division, SLAC Site Security, and the local fire department.

Why

Spills, defined as the release of any material that results in an increased risk or potential risk to human health, the environment, and/or property, must be contained and cleaned up in a manner that minimizes risk to human health, the environment, and/or property, and reported in compliance with Department of Energy (DOE) requirements and state and federal regulations.

What do I need to know

Workers are authorized to respond to spills only if all these conditions are met:

1. Handling the spilled material is already in their work planning and control documentation.
2. The appropriate personal protective equipment (PPE) and spill response material is available.
3. It is safe to do so.

Properly trained responders will handle all other spills. All spills must be reported, using SLAC’s incident notification procedure: for emergencies call 911, then SLAC Site Security (ext. 5555), then supervisor; for non-emergencies, call supervisor, then SLAC Site Security (security immediately if supervisor is unavailable). This ensures that management will be notified, the spill will be cleaned up safely, waste materials will be disposed of properly, and all reporting and recordkeeping requirements will be met.

When

The requirements of this chapter take effect 21 May 2018.

Where do I find more information

SLAC Environment, Safety, and Health Manual (SLAC-I-720-0A29Z-001)
