Chapter 24: Training

Quick Start Summary

1 Who needs to know about these requirements

The requirements of Training apply to all persons on-site, employees and non-employees, their SLAC supervisors and points of contact, and SLAC Site Security, whenever they are at SLAC.

2 Why

Environment, safety, and health (ESH) training is essential for ensuring everyone can perform his or her role safely at SLAC.

3 What do I need to know

Everyone at SLAC, employees and non-employees alike, must complete minimum ESH training, including orientation, in order to work at SLAC and enter controlled areas unescorted. Minimum training must be completed in order to obtain a SLAC identification badge (except for temporary badges for those being escorted).

In addition to the minimum training for site access, workers may be required to complete work-specific ESH training before beginning work. This training is assigned by supervisors for SLAC employees and points of contact for non-employees (users and subcontractors).

Supervisors and points of contact are responsible for ensuring workers are properly trained before authorizing them to perform work. Workers are responsible for immediately notifying their supervisor or point of contact if they encounter work conditions for which their current training may be inadequate.

4 When

The requirements of this chapter take effect 15 February 2011.

5 Where do I find more information

SLAC Environment, Safety, and Health Manual (SLAC-I-720-0A29Z-001)
