Penetration Safety: Penetration Permit

Work Request #	(if applicable):	Date Permit Submitted: December 20, 2007

General Information

Area/location	Date(s) work will be performed	Job description (location of penetration, material to be penetrated, tools, etc)
Research Yard	12/20/07	Drill survey monuments on the concrete apron in the north side of the BTH tunnel in the Research Yard
Responsible line manager or designee Name/Organization)	Phone #	Other information (e.g., depth of penetration, etc)
Catherine LeCocq SLAC/AEG	650-926- 2335	See AEG website for procedure: http://www- group.slac.stanford.edu/met/Align/TechAnalysis/Monumentation Drilling Specifications.pdf

Class 1 Penetration Checklist

Hollow walls, ceilings or floors, or 2 inches or less into solid material

	Yes	N/A
Checked other side of walls, under floors, or through false ceilings for hazards?		X
Verified stud locations?	9	. x
Non-conductive tools to be used?		_ x
Masonry bits and hand tools to be used for initial penetration?	X	
Drill bit stops or short drill bits (2 inches or less) to be used for solid material?		X
Electrical tools equipped with GFCIs or double insulated?	X	
GFCIs tested?		X
Appropriate PPE specified (see page 3) and obtained?	x	
PPE inspection(s) up to date?	x	
Penetration is within a radiologically controlled area or a radioactive material management area? If yes, complete the "Radiation Safety" portion of the form.		x
Penetration is part of accelerator shielding (for example: the Accelerator Housing Structure, End Station A Hall, Klystron Gallery Floor)? If yes, complete the "Radiological Safety" section of the form.	g 	х
A Radiation Safety Work Control Form (RSWCF) is required for all penetrations that meet any of the following conditions (contact the area safety officer for more information):		х
 Into or through non-concrete radiation shielding Into concrete radiation shielding, with penetration exceeding 2 inches in diar Into concrete radiation shielding, with penetration exceeding 6 inches deep Into concrete radiation shielding where penetration is not re-filled with a den concrete or steel) All the way through concrete radiation shielding 		erial (e.g
Checklist completed by: Catherine LeCocq Date:	12/20/0	7

Class 2 Penetration Checklist (N/A)

Greater than 2 inches into solid material

	Yes	N/A
Reviewed historical records, engineering plans, and drawings?		
Area responsible person/designee, customer/requester, or other personnel consulted?		
Visually inspected proposed location of penetration?		
Checked other side of walls, under floors, or through false ceilings for hazards?		
De-energized and locked/tagged-out energy sources as required?		
NDT used to determine if additional hazards exist?		
If yes, list results under "Hazards."		
NDT used to determine wall reinforcement?		
Electrical tools equipped with GFQI or double-insulated?		
GFCIs tested?		
Appropriate PPE specified (see page 3) and obtained?		-
PPE inspection(s) up to date?		
Short drill bits used or equipment marked to limit penetration depth?		
Penetration is within a radiologically controlled area or a radioactive material	_	
management area. If yes, complete the "Radiological Safety" section of the form		
Penetration is part of accelerator shielding (for example: the Accelerator Housing Structure, End Station A Hall, Klystron Gallery Floor)? If yes, complete the	9	
"Radiological Safety" section of the form.		
A Radiation Safety Work Control Form (RSWCF) is required for all		
penetrations that meet any of the following conditions (contact the		
area safety officer for more information):		
Into or through non-concrete radiation shielding		
 Into concrete radiation shielding, with penetration exceeding 2 inches in dian Into concrete radiation shielding, with penetration exceeding 6 inches deep 	neter	
 Into concrete radiation shielding where penetration is not re-filled with a dense concrete or steel) 	se mate	rial (e.g.
All the way through concrete radiation shielding	0.00	1
		1
Checklist completed by: Date:		_

Complete "Hazards and Required Controls" section.

Penetration Safety: Penetration Permit Hazards and Required Controls

May reference JHAM or AHA if hazards/controls are documented there

Hazards		
Type and size of energy sources present (including results from NDT, if used):		
See AEG routine field JHAM		
http://www-group.slac.stanford.edu/met/Align/Safety/JHAM AEG Field.pdf		
Hazards specific to the tools that will be used:		
Work environment hazards (such as moisture, lead, asbestos, etc.):		
Work environment nazarda (aden as moistare, read, aspestos, etc.).		
Other hazards:	10.5	
Controls		
Procedural requirements:		
See AEG routine field JHAM		
http://www-group.slac.stanford.edu/met/Align/Safety/JHAM_AEG_Field.pdf		
TREP.//www-group.siac.starilord.edu/met/Align/Calety/Off/Align/ALO Treid.pdf		
Types and classification of PPE:		
Other controls:		

Complete the "Radiological Safety" section if appropriate, and complete the Review, Approval, and Authorization section at the end of this form.

Radiological Safety (N/A)

Additional requirements for this penetration: Penetration does not need special requirements. Checked by: Date: Review, Approval, and Authorization Any deviation from the scope of work identified on this permit requires re-validation of this permit. This penetration permit expires 30 days after issuance. Class 1 & 2 Authorizations I have discussed the hazards and controls with the workers and verified that they are trained/qualified to perform the work.	nanagement area, or accelerator f
