## LCLS II Magnet Fiducialization Report Injector Quadrupole 1.26Q3.5

Inspector: K. Caban
Engineer: J. Amann
Drawing No. : SA-380-309-12 R1
Barcode No.: 4037
Mfg. S/N : 039

## Coordinate System Setup

## Spatial Alignment

The Spatial Alignment of the magnet is created through a composite best-fit of the pole tips. Each pole tip scanned .150 inch inboard from the upstream magnet face and the downstream magnet face. A composite best-fit of the upstream poles and the downstream poles is made with the nominal pole tip shape and location. An axis is created through the two best-fit centerpoints. This axis is the spatial alignment of the magnet and defines the Z axis.

## Planar Alignment

The Planar Alignment of the magnet is the created by averaging the rotations of the composite best-fits of the upstream pole tips and downstream pole tips. This direction defines the $Y$ and $X$ directions of the magnet.

## Coordinate Origins

The origins of the magnet coordinate system are as follows. The XY origin lies on the axis of spatial alignment. The $Z$ origin is the intersection of the mid-plane between the upstream and downstream magnet faces and the $Z$ axis.
