

LCLS-II HXU Measurement Results

Serial number from manufacturers label:	HXU-007
---	---------

Measurement Procedure:

The measurements have been carried out after the undulator segment had been fully tuned according to the “LCLS-II Undulator Test Plan” (LCLS-TN-17-1).

General Hall Probe Scan Evaluation Parameters

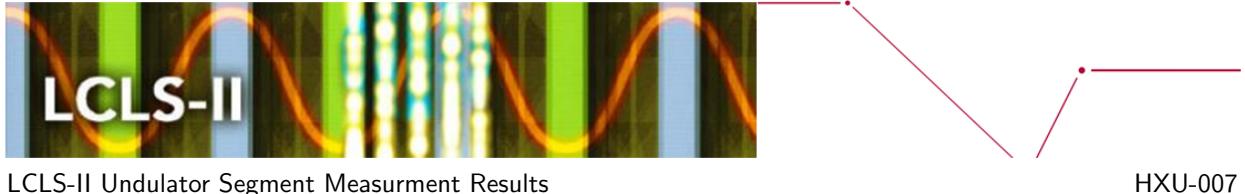

Undulator Temperature (should be 20.0)	20.0 ± 0.1	$^{\circ}\text{C}$
First core pole #	8	
Last core pole #	253	
Tuning Gap	9.000	mm

Evaluation of Hall Probe Scans at Commissioning Gap

Commissioning Gap Temperature (should be 20.0)	20.0 ± 0.1	$^{\circ}\text{C}$
$rms (B_{pk} /\langle B_{pk} \rangle - 1)$	0.0023	
K_{eff} at Commissioning Gap (should be 2.3400)	2.3402	
Commissioning Gap	7.983	mm
$I1X$ (over 4.012667 m) (should be within ± 40)	10	μTm
$I2X$ (over 4.012667 m) (should be within ± 150)	21	μTm^2
$I1Y$ (over 4.012667 m) (should be within ± 40)	3	μTm
$I2Y$ (over 4.012667 m) (should be within ± 150)	-7	μTm^2
Phase Shake (rms phase fluctuations over core poles (< 4.0))	1.4	degXray
Cell Phase Advance (over 4.012667 m)	48599.2 (135 \times 360-0.8)	degXray
Undulator Entrance Phase ¹	2249.8 (25 \times 90-0.2)	degXray
Undulator Exit Phase ²	2248.6 (25 \times 90-1.4)	degXray

¹Phase advance from cell start (undulator center -2.006334 m) to center of physical pole 8.

²Phase advance from physical pole 253 to cell end (undulator center +2.006334 m).

Undulator Encoder Settings

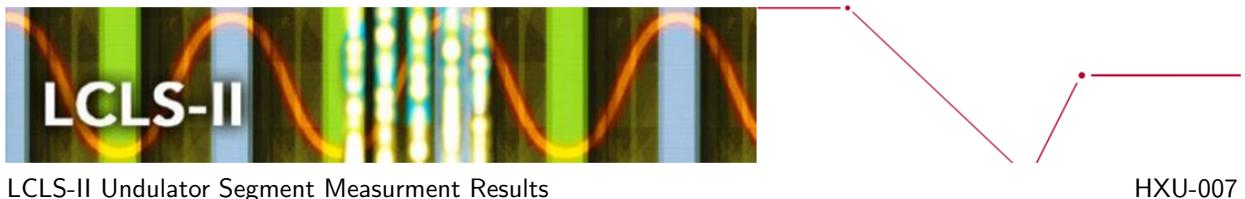

USGapEncoderOffset	41.1716
DSGapEncoderOffset	40.1165
USWLinearEncoder.AOFF	90.3131
DSWLinearEncoder.AOFF	90.5731
USALinearEncoder.AOFF	91.1503
DSALinearEncoder.AOFF	92.7522

Undulator Load Cell Readings at Tuning Gap (Gap Opening)

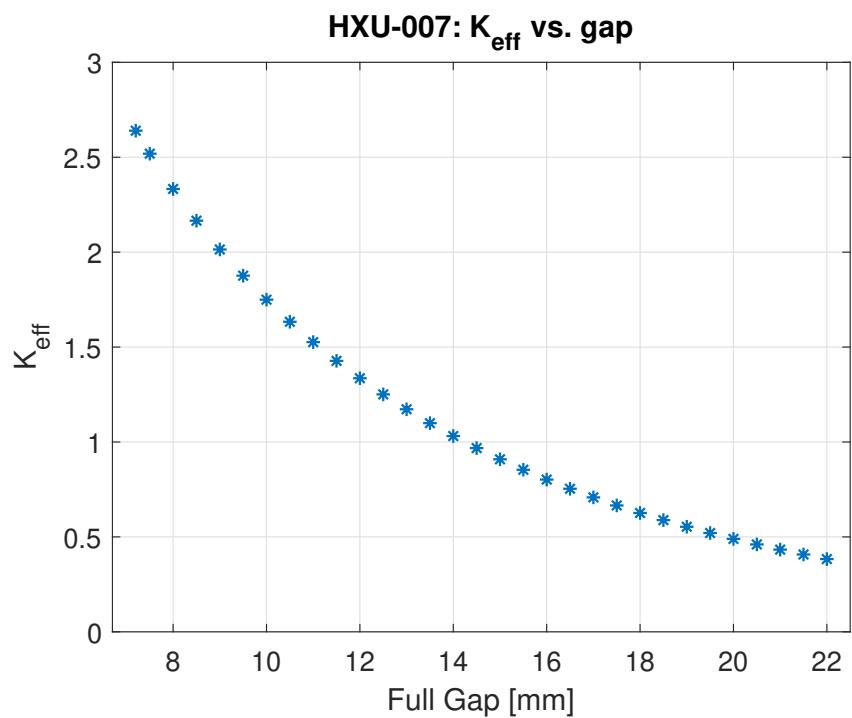

LC_DAL_FORCE	-108.6
LC_DAU_FORCE	-178.7
LC_DWL_FORCE	-291.0
LC_DWU_FORCE	-32.0
LC_UAL_FORCE	-161.6
LC_UAU_FORCE	-151.4
LC_UWL_FORCE	-147.0
LC_UWU_FORCE	-166.5

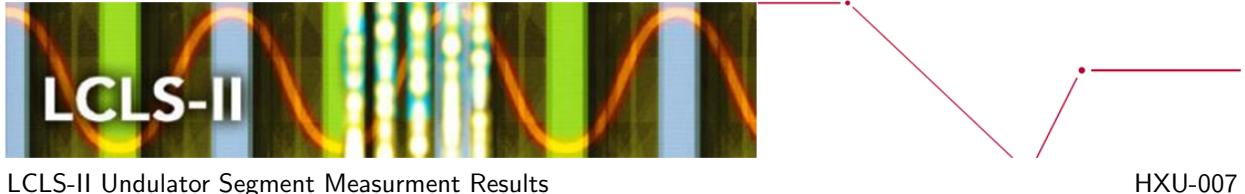

Undulator Load Cell Readings at 100 mm Gap (Gap Opening)

LC_DAL_FORCE	9.0
LC_DAU_FORCE	1.2
LC_DWL_FORCE	2.2
LC_DWU_FORCE	1.0
LC_UAL_FORCE	9.0
LC_UAU_FORCE	1.2
LC_UWL_FORCE	1.2
LC_UWU_FORCE	2.9

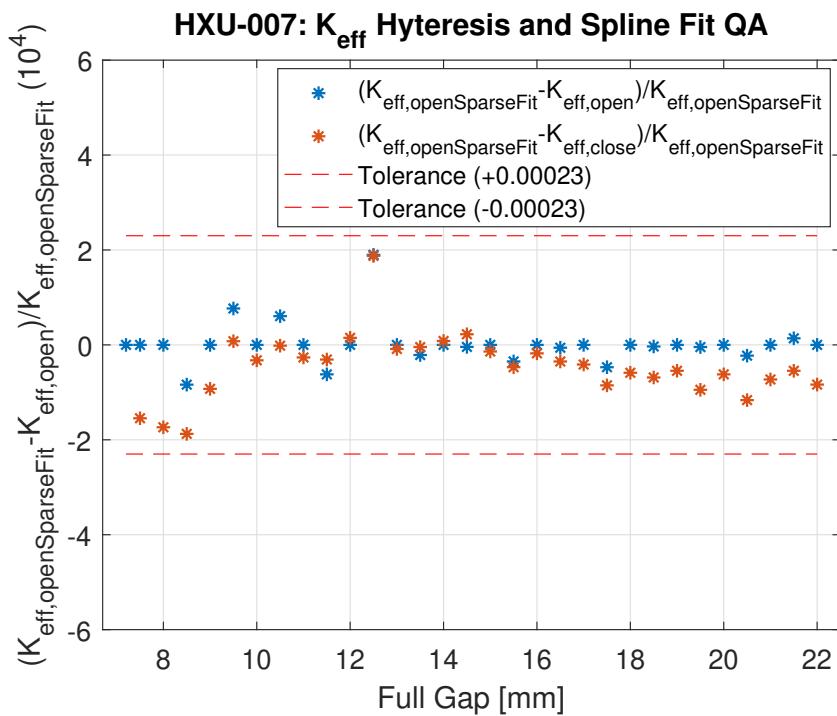

Evaluation of Hall Probe Scans: K_{eff} vs. gap

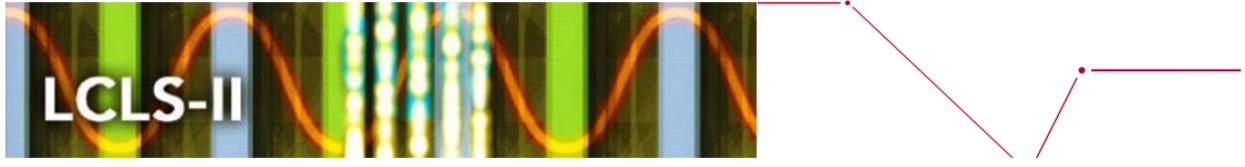

Evaluation of Hall Probe Scans: K_{eff} Hysteresis using Half Gap Encoders

Plotted functions have been calculated from measured values `openKeff` (`opengap`) and `closeKeff` (`closegap`) using the following Matlab calculations:

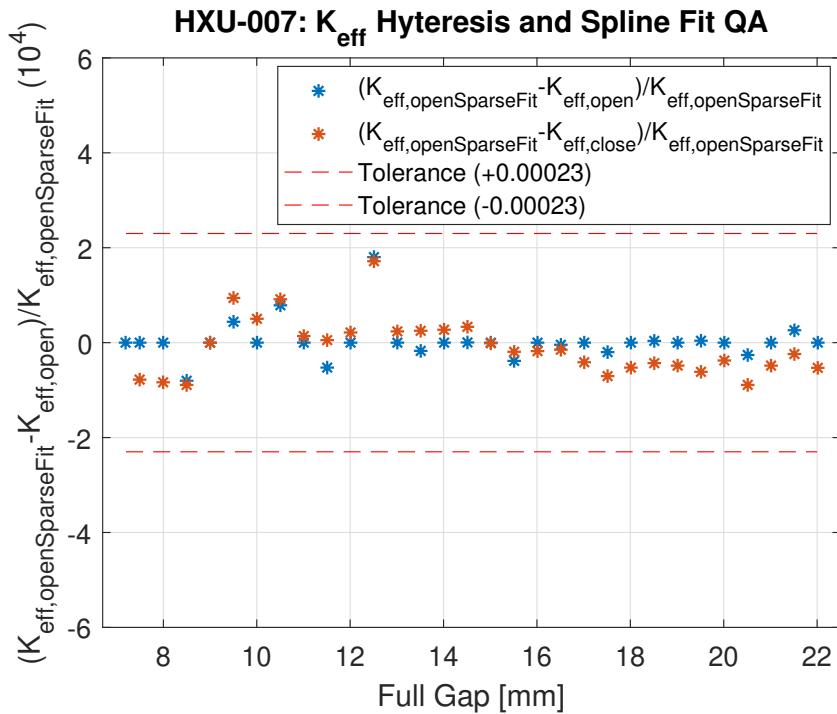

Blue Stars: $1 - \text{openKeff} ./ \text{spline}(\text{opengap}([1,2,[3:2:end]]), \text{openKeff}([1,2,[3:2:end]]), \text{opengap})$
 Green Stars: $1 - \text{closeKeff} ./ \text{spline}(\text{opengap}([1,2,[3:2:end]]), \text{openKeff}([1,2,[3:2:end]]), \text{closegap})$

Evaluation of Hall Probe Scans: K_{eff} Hysteresis using Full Gap Encoders

Plotted functions have been calculated from measured values openKeff (opengap) and closeKeff (closegap) using the following Matlab calculations:

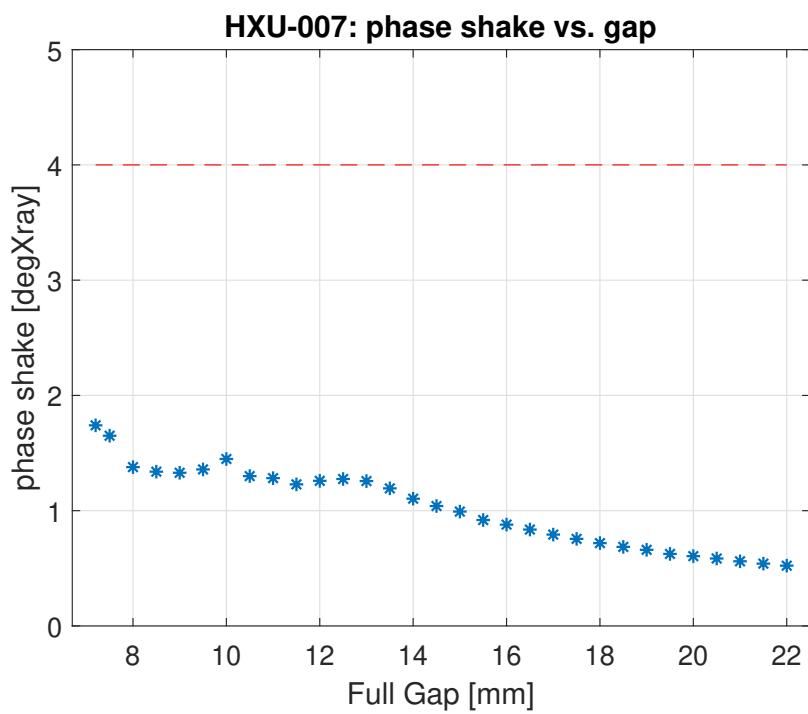

Blue Stars: $1 - \text{openKeff} ./ \text{spline}(\text{opengap}([1,2,[3:2:end]]), \text{openKeff}([1,2,[3:2:end]]), \text{opengap})$
 Green Stars: $1 - \text{closeKeff} ./ \text{spline}(\text{opengap}([1,2,[3:2:end]]), \text{openKeff}([1,2,[3:2:end]]), \text{closegap})$

Capacitive Sensor Arrangement

The following plots show the pole and magnet position measurements. The LBNL system has two back-to-back capacitive probes on one probe holder. The x and y stages on the Kugler bench are positioned so that the probe is in the proper location for each of the 9 scan locations. For the data analysis, the average pole position in each scan is used as reference for the plotted pole and magnet positions. Note that for all plots, the first three and last three poles of the device are omitted since the measurement is not accurate due to end effects in the capacitance probe measurement.
