## LCLS-II HXU Measurement Results

This report is intended to document the results of HXU segment tuning at LBNL and ANL. It should be sent to SLAC for approval before the HXU segment gets shipped.

## Evaluation of Hall Probe Scans: $K_{eff}$ vs $gap$

---

**Evaluation of Hall Probe Scans:  $K_{eff}$  Hysteresis using Half Gap Encoders**

Plotted functions have been calculated from measured values openKeff (opengap) and closeKeff (closegap) using the following Matlab calculations:

Blue Stars: `1-openKeff ./ spline(opengap(1:2:end),openKeff(1:2:end),opengap)`

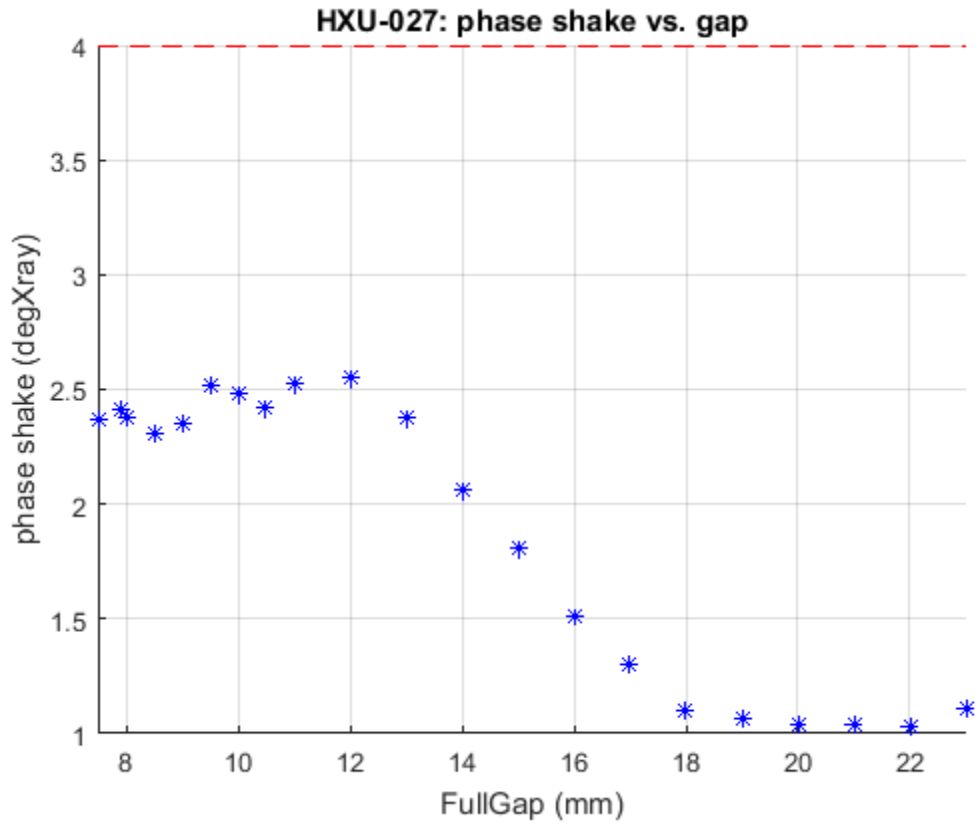

Green Stars: `1-closeKeff ./ spline(opengap(1:2:end),openKeff(1:2:end),closegap)`

## Capacitive Sensor Arrangement

---

The following plots show the pole and magnet position measurements. The ANL system has two back-to-back capacitive probes on one probe holder. The x and y stages on the 6-meter bench are positioned so that the probe is in the proper location for each of the 9 scan locations. For the data analysis, the average pole position in each scan is used as reference for the plotted pole and magnet positions. Note that for all plots, the first three and last three poles of the device are omitted since the measurement is not accurate due to end effects in the capacitance probe measurement.
