Chapter 29: Respiratory Protection

Evaluation and Certification Procedure

1 Purpose

The purpose of this procedure is to ensure that respirators are used appropriately and safely. It covers evaluating a worker’s need for a respirator; selecting the appropriate respirator and cartridge type and changeout schedule; medically evaluating and training workers; and fit testing. It applies to workers, supervisors, ESH coordinators, the respiratory protection program manager, and Occupational Health.

2 Procedure

This procedure is to be performed when

1. Adding a worker to the respiratory protection program (deciding for the first time a worker needs a respirator)
2. Renewing a worker (updating training, fit testing, and medical evaluation, required every year)
3. Removing a worker from the program (deciding a worker no longer needs a respirator)

</table>
| 2    | ESH coordinator | Reviews need for a respirator, based on  
|      |              |   - Supervisor justification  
|      |              |   - Knowledge of operations  
|      |              |   - Existing or new industrial hygiene survey (see Industrial Hygiene and the Industrial Hygiene Document Database)  
|      |              | Completes authorization section; if a respirator is justified recommends model and cartridge type  
|      |              | Note: respirators are required when an occupational exposure limit (OEL) is or could be exceeded  
|      |              | Returns form to supervisor |
| 3    | Supervisor   | If adding (or renewing) a worker, enters (or confirms) the following courses in the worker’s SLAC Training Assignment (STA)  
|      |              |   - ESH Course 241, Respiratory Protection Training (ESH Course 241)  
|      |              |   - ESH Course 241ME, Respirator Safety Medical Exam (ESH Course 241ME)  

See the COVID-19 Resource Center for modifications.
### Respiratory Protection | Evaluation and Certification Procedure

**2.1 Additional Requirements**

#### 2.1.1 Fit Testing

In addition to initial and annual tests, a fit test must be administered whenever an individual selects a different respirator or when changes occur to the person’s physical condition that could prevent an effective...
face seal. Such conditions include facial scarring, dental changes, cosmetic surgery, or an obvious change in body weight (a guideline is the loss or gain of 20 pounds).

2.1.2 Medical Re-evaluation

Supervisors must immediately refer workers who experience difficulty in respirator use to the Occupational Health Center for medical reevaluation before allowing further respirator use. Conditions that would indicate a need for reevaluation include the following:

- Worker has difficulty breathing, shortness of breath, dizziness, or a severe psychological reaction during respirator use or any phase of fit testing.
- Worker reports signs or symptoms that are related to respirator use.
- Any change in individual exposure or stress, physical difficulty in respirator use, or change in work conditions such as physical work effort, protective clothing, or temperature.

2.2 Voluntary Respirator Use

Workers who wish to wear a respirator voluntarily, when a survey or other determination has shown that a respirator is not required, must follow the procedure above and must meet all requirements of this program.

2.3 Voluntary Dust Mask / N95 Respirator Use

When a respirator is not required, an individual may choose to use a dust mask or N95 respirator instead. Workers may elect to take the respirator safety training course (ESH Course 241) but will not undergo a medical evaluation, spirometry test, or practical fit test unless required for other respirator use. There is no formal approval process for voluntary use of a dust mask or N95 respirator.

Workers electing to wear a dust mask or N95 respirator voluntarily must before doing so complete a Voluntary Respirator Use Agreement and become familiar with 8 CCR 5144 Appendix D, “Information for Employees Using Respirators When Not Required Under the Standard”.

If voluntary use is elected, SLAC will provide the wearer with a National Institute of Occupational Safety and Health (NIOSH) approved dust mask or N95 respirator.

Warning Dust masks and N95 respirators are not to be worn as protection against harmful gases or vapor, toxic contaminants, high concentrations of contaminants (such as those released during sandblasting) or in atmospheres that are immediately dangerous to life or health (IDLH) or oxygen deficient.

3 Forms

The following forms and systems are required by this procedure:

- Respiratory Protection: Respirator User Form (SLAC-I-730-0A09J-010). Form for documenting authorization to use a respirator and completion of required medical evaluation, training, and fit testing.
Voluntary Respirator Use Agreement (Stanford Employee Health Patient Portal>Travel/Respirators/Vaccinations>Voluntary Respirator User Form, SUNet login required). Form for documenting voluntary respirator use and acknowledging requirements

4 Recordkeeping

The following recordkeeping requirements apply for this procedure:

- Occupational Health maintains
  - Medical history questionnaire forms and medical exam records for the duration of the affected worker’s employment plus 30 years
  - Voluntary respirator use agreements
- The respiratory protection program manager maintains
  - Completed respirator user forms
  - Respirator fit test results until the next fit test for the worker
