

AEG Information for SLAC's Hazardous Materials Business Plan (HMBP):

There are six standard car batteries stored for the Alignment Engineering Group in the Alignment Shop located in building 26. In the drawing below they are located in the area labeled 109A in the Alignment Shop.

They have no PC#s, the manufacturer is Universal Battery, model UB12900.

An EPA guideline indicates that an average size car battery contains approximately 5 pounds of sulfuric acid each.

The Alignment Engineering Group shop personnel charges and maintains these six batteries.
